woodworking with the router pdf

A router is a hand tool or power tool that a worker uses to rout (hollow out) an area in relatively hard material like wood or plastic. Routers are mainly used in woodworking, especially cabinetry. Routers are typically handheld or fastened cutting end-up in a router table. The hand tool type of router is the original form. It is a specialized type of hand plane with a broad base and a narrow ...

A CNC wood router is a CNC router tool that creates objects from wood. CNC stands for computer numerical control. The CNC works on the Cartesian coordinate system (X, Y, Z) for 3D motion control. Parts of a project can be designed in the computer with a CAD/CAM program, and then cut automatically using a router or

other cutters to produce a finished part.

This "Router Lathe Duplicator" is something which I originally built years ago, since then I have wanted to build a second version, making some much needed improvements to the design.. The concept essentially replaces a conventional turning chisel for a router which is fixed to two axis™ of motion.
